Interazioni stella-pianeta (Invited talk)

Wednesday, 20 May 2015 10:45 (20 minutes)

Star-Planet Interactions (SPIs) form a class of phenomena predicted by a growing number of theoretical models but very elusive from an observational point of view with current instrumentation and methodologies. In this talk I will focus on SPIs of magnetic origin, and I will present recent results which encourage pursuing this research field.

Presenter: MAGGIO, Antonio
