Tempo e “fantasia di sparizione”: la nascita dell’astronomia

Tuesday, September 8, 2020 12:20 PM (25 minutes)

An increasing number of Paleolithic rock depictions and artifacts is suggesting the presence of an ancient astronomical knowledge but little is known about the reasons behind the development of a complex astronomical thought. By using modern theories of human mind, especially the “Human Birth theory” proposed by the psychiatrist Massimo Fagioli, we could explore a novel possibility for the birth of astronomy as symbolization of time.
