The Scaled Agile Framework (SAFe) distilled - and how it is working for SKA.

Thursday 29 October 2020 11:20 (30 minutes)

Agile methodologies are becoming more and more popular while approaching the development of big software systems. Not only private software companies but also banks, telecommunications and transportation companies, health care, and others moved to this kind of approach to managing their business. SAFe is one of the possible frameworks for supporting this change and in particular, it is the one chosen by SKA to manage the software development process.

This presentation will give you a very high-level introduction of the Scaled Agile Framework along with some examples of its adoption in SKA.
