SKA SRC - a data-centric point of view

Friday, 8 October 2021 10:50 (20 minutes)

Building a regional center for SKA poses a number of challenges that are revolving around the core of the business, namely the data products that will be made available from the SKAO facilities in South Africa and Australia. There are different scenarios that involve present and future infrastructure, software and hardware bottlenecks that will be discussed in order to provide an in-depth insight of how an SRC will potentially deal with such issues.
