

HERMES-Pathfinder

fabrizio.fiore@inaf.it

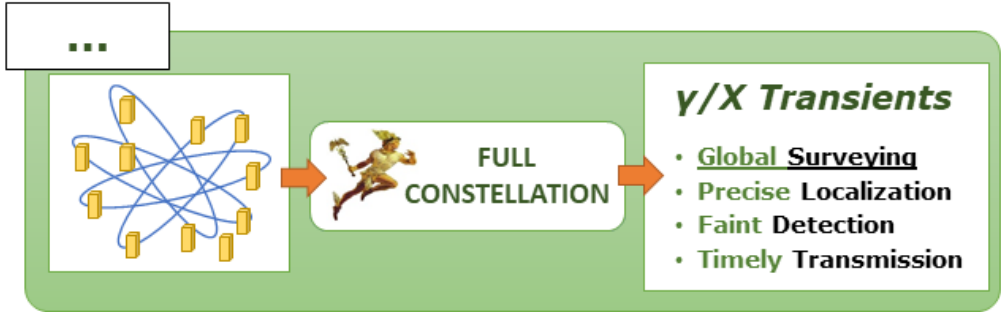

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 821896

The project has received funding from the Accordo Attuativi ASI-INAf and ASI-POLIMI

Motivation

- Prove that *breakthrough science* can be done with nano-sats. “**Smaller**” enables the “*faster, better, cheaper*”¹ mantra, but also *expand usership*, increasing competition *and* collaborations
- *Join the multimessenger revolution* by providing a first mini-constellation for GRB localizations
- Develop miniaturized payload technology for breakthrough science and demonstrate COTS applicability to challenging missions, contribute to Space 4.0 goals
- Push and prepare for a high reliability, large constellation

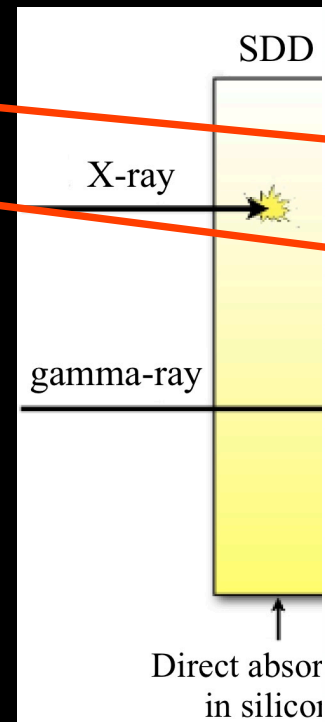

HERMES-PF & SpIRIT in a nutshell

- HERMES Pathfinder: six 3U cubesat equipped with advanced X-ray/gamma-ray wide field detector. Nearly equatorial LEO.
- SpIRIT: 6U cubesat managed by University of Melbourne and funded by ASA. Host 1 HERMES-PF X-ray/gamma-ray payload + S-band system. SSO.

Payload concept

- Photo detector, SDD
Scintillator crystal GAGG
- 5-300 keV (3-1000 keV)
- $\geq 50 \text{ cm}^2$ coll. area
- a few st FOV
- Temporal res. $\leq 300 \text{ nsec}$
- $\sim 1.6 \text{ kg}$

Fuschino+2018, 2020, Evangelista+2020,2022, Campana+2020,2022

Where we are: SpIRIT

- SpIRIT payload FM delivered to UoM on July 2022 after calibration and qualification (environmental tests @ SERMS on June 2022).
- SpIRIT S-band system delivered to UoM Q2 2022
- Integration tests (mechanical, electrical, electronic) performed in July 2022
- S/M payload integration planned for October 2022, full system acceptance tests planned for November-December 2022, launch October 2023

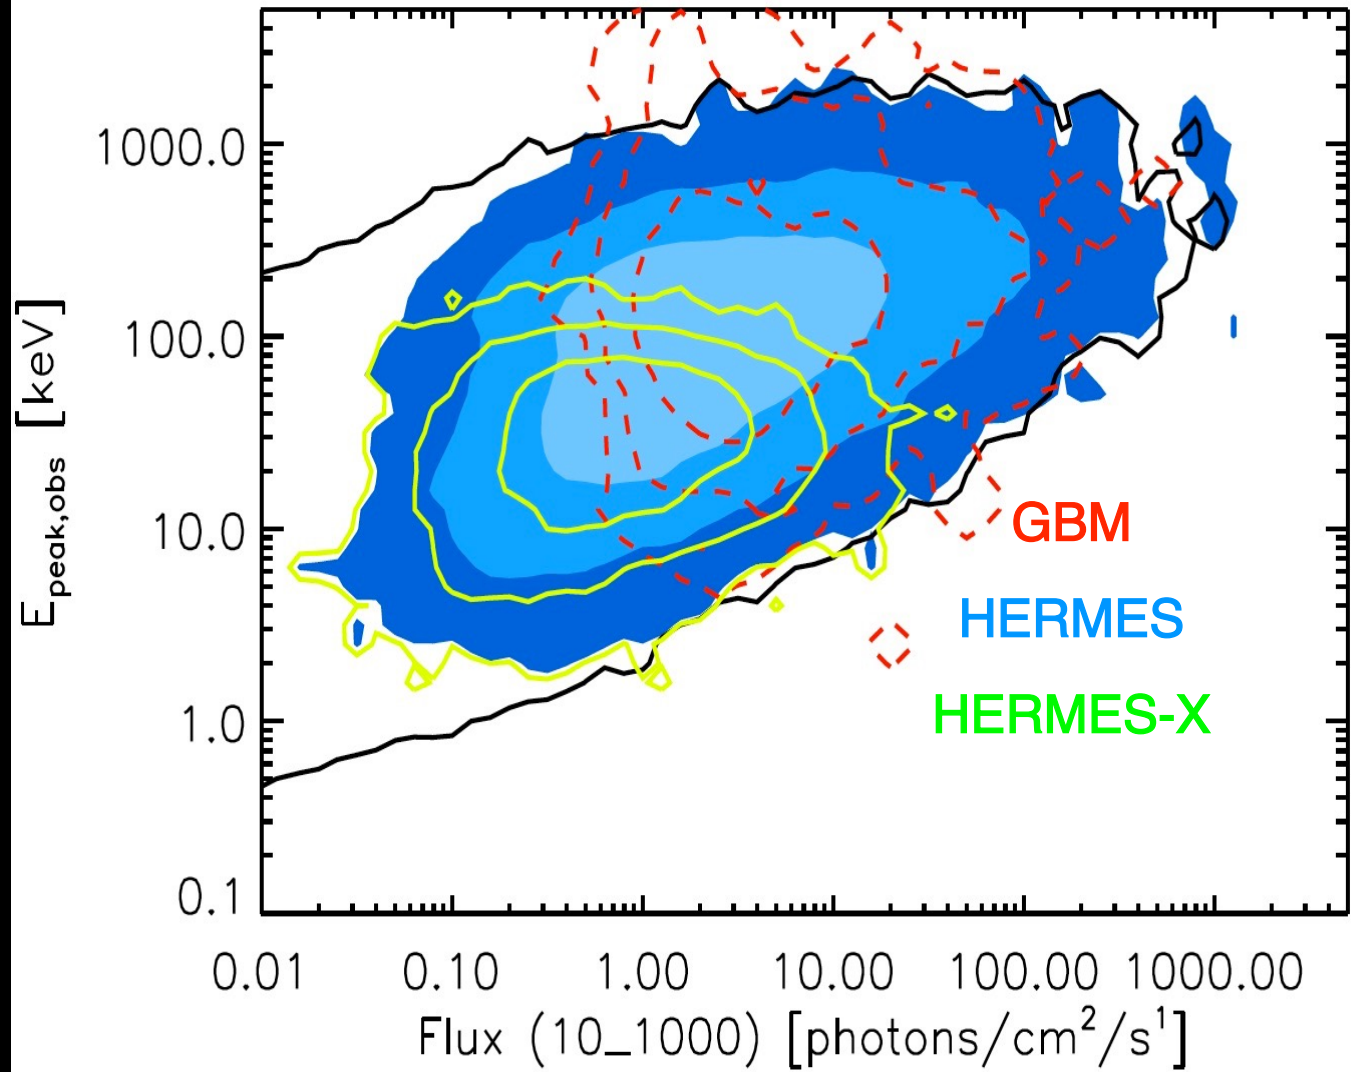

Where we are: HERMES pathfinder

- PFM ready for integration in the S/M after calibration. Integration planned for Q4 2022. QR planned for February 2023
- Payload FM2, FM3 ready. FM4, FM5 and FM6 integration and test planned for October-December 2022
- FAR Q2-Q4 2023 Launch with Virgin Orbit Q2 2024

Performances

Ghirlanda & Nava

Localization performances

$$\sigma_{\text{Pos}} = 2.4^\circ [(\sigma_{\text{CCF}}^2 + \sigma_{\text{sys}}^2) / (N-3)]^{0.5}$$

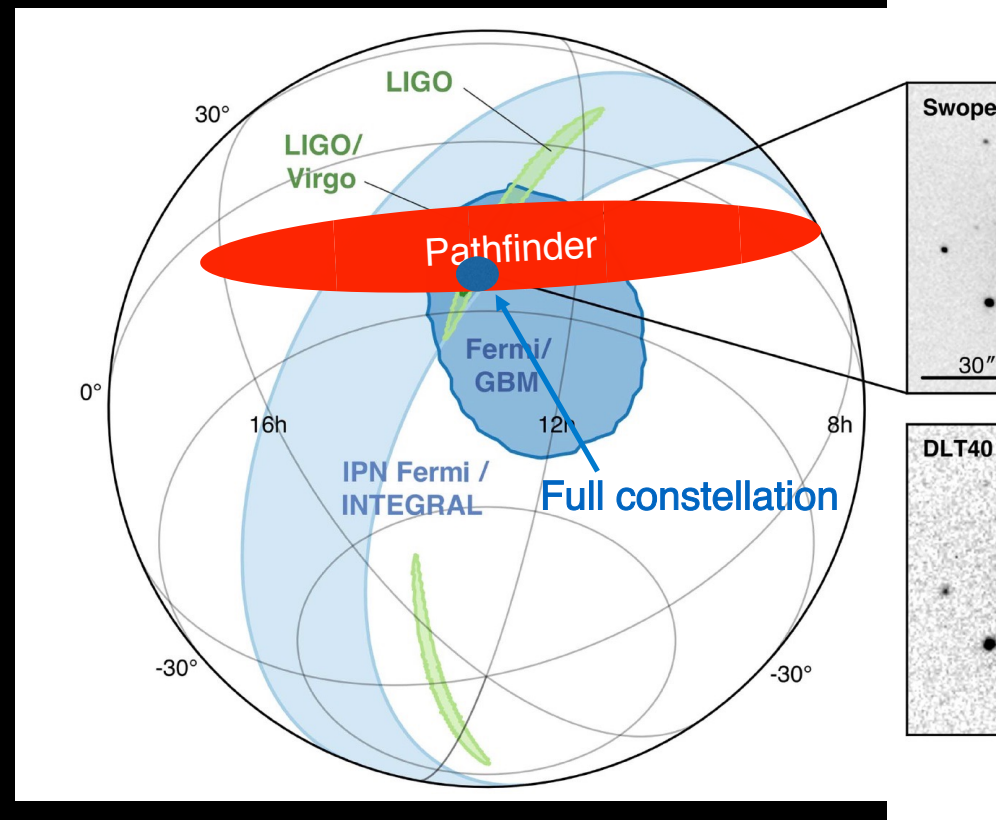

$\langle B \rangle \sim 7000\text{km}$

$N(\text{pathfinder}) \sim 6-8$, active simultaneously 3-4

$\sigma_{\text{Pos}} \sim 2.4 \text{ deg}$ if $\sigma_{\text{CCF}}, \sigma_{\text{sys}} \sim 1 \text{ ms}$

Goal for a real observatory (more units, longer baseline)

$\sigma_{\text{Pos}}(\text{FC}) \sim 15 \text{ arcmin}$ if $\sigma_{\text{CCF}}, \sigma_{\text{sys}} \sim 1 \text{ ms}$

HERMES PF Institutes

- INAF, ASI, PoliMi, UniCagliari, UniPalermo, UniUdine, INFN, UniTrieste, UniPavia, UniFedericoll, UniFerrara, FBK, FPM
- University of Tubingen (Germany)
- University of Eotvos Budapest, C3S (Hungary), MUNI (CZ)
- University of Nova Gorica, Skylabs, AALTA (Slovenia)
- Deimos (Spain)
- Institute of High Energy Physics, Chinese Academy of Science
