

# On the effects of unresolved binaries on the deduced total mass and stellar mass function of stellar clusters

Henriette Wirth, František Dinnbier, Pavel Kroupa and  
Ladislav Šubr

Florence, November 22nd 2023

# Introduction

visible mass

**Figure:** NGC 3201, obtained with the WFI instrument on the ESO/MPG 2.2-m telescope at La Silla, Credit:ESO

# Introduction

visible mass

dynamical mass

Illingworth (1976):

$$M_{\text{dyn}} = 670 r_e \sigma_r^2$$

Figure: NGC 3201, obtained with the WFI instrument on the ESO/MPG 2.2-m telescope at La Silla, Credit:ESO

# Introduction

visible mass

dynamical mass

Illingworth (1976):

$$M_{\text{dyn}} = 670 r_e \sigma_r^2$$

Figure: NGC 3201, obtained with the WFI instrument on the ESO/MPG 2.2-m telescope at La Silla, Credit:ESO

# Introduction

visible mass

dynamical mass

Illingworth (1976):

$$M_{\text{dyn}} = 670 r_e \sigma_r^2$$

# Introduction

**Figure:** Credit: NASA, ESA, and STScI.

# Introduction

Röser et al.  
(2011):

$$M_{\text{obs}} = 276 M_{\odot}$$

**Figure:** Credit: NASA, ESA, and STScI.

# Introduction

Figure: Credit: NASA, ESA, and STScI.

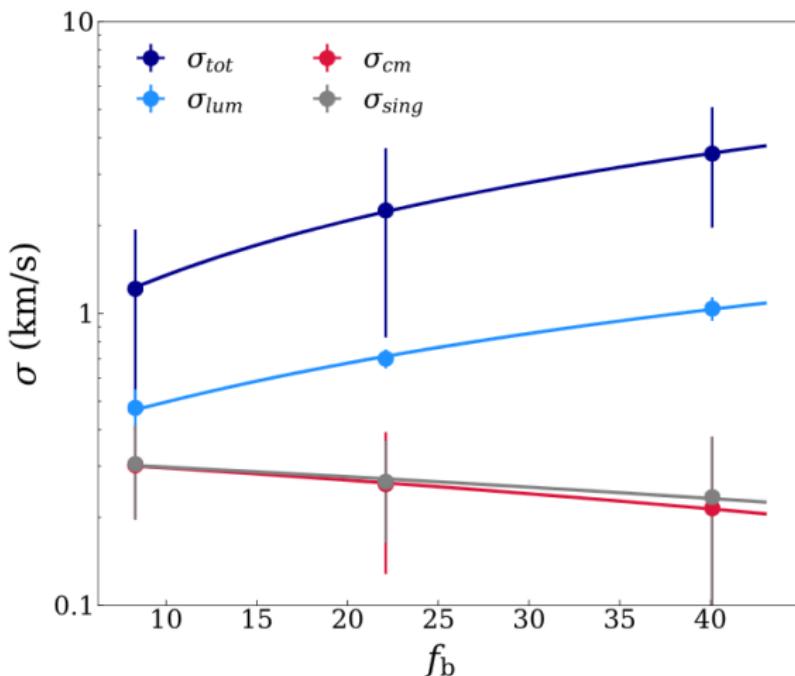

Röser et al.  
(2011):

$$M_{\text{obs}} = 276 M_{\odot}$$

- up to a factor 4 larger using the velocity dispersion

# Overestimate of the dynamical mass

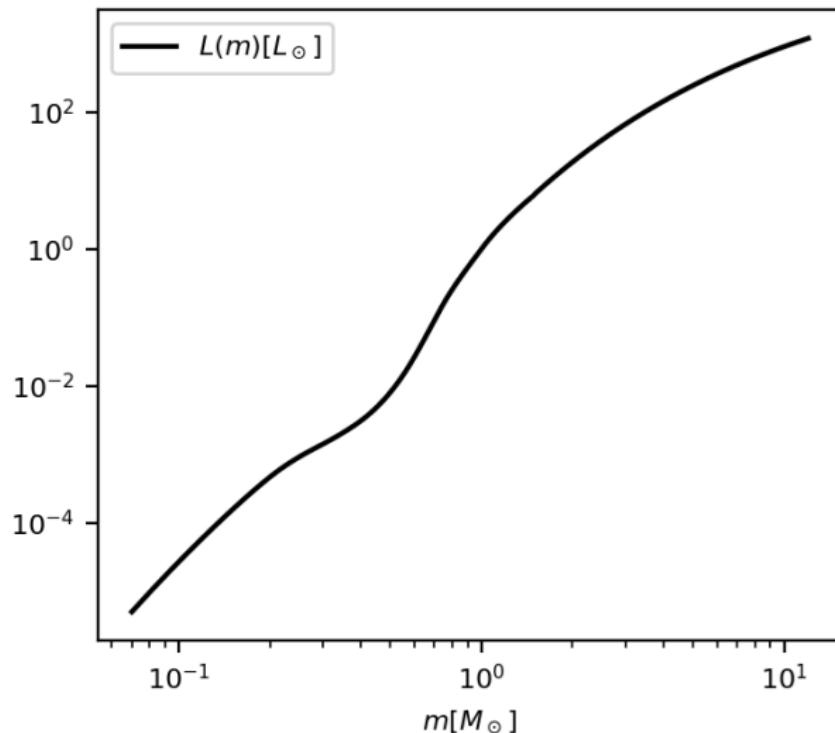

Rastello et al. (2020):

Illingworth  
(1976):

$$M_{\text{dyn}} = 670 r_e \sigma_r^2$$

## Underestimates of the Systemmass of Binaries

**Figure:** The mass-luminosity relation by Kroupa et al. (1993), plot from Wirth et al. (2023, in submission)

# Underestimates of the Systemmass of Binaries

# Underestimates of the Systemmass of Binaries

Figure: The mass-luminosity relation by Kroupa et al. (1993), plot from Wirth et al. (2023, in submission)

## The model

$$M_{\text{ini}} = 6400 M_{\odot}$$

$$r_h = 0.31 \text{ pc}$$

# Underestimates of the Systemmass of Binaries

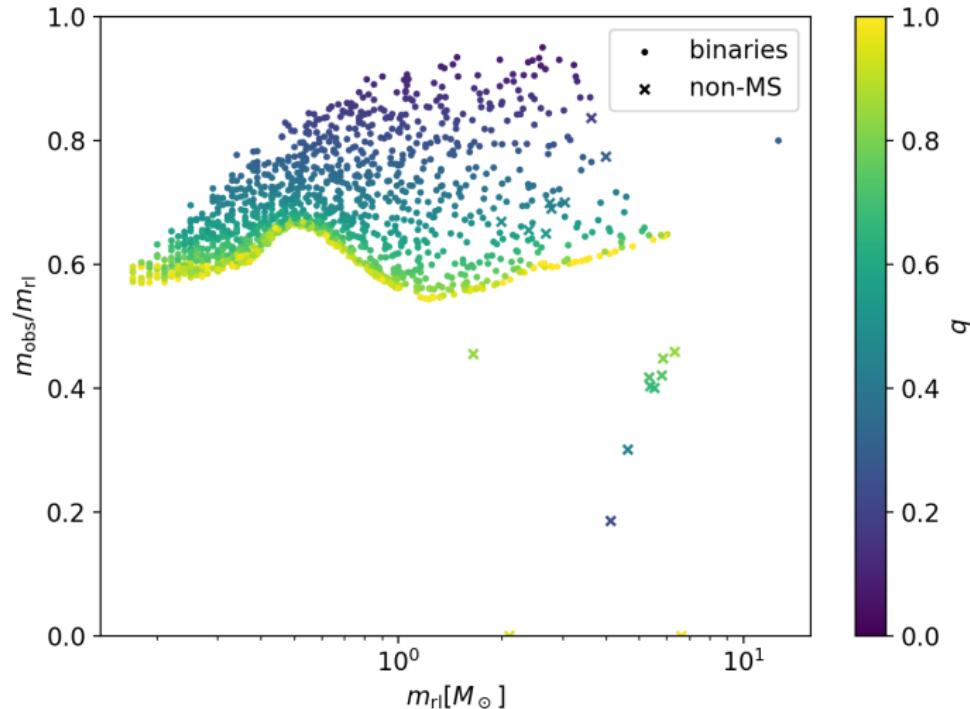

Figure: Wirth et al. (2023, in submission)

## Underestimates of the total mass of the cluster

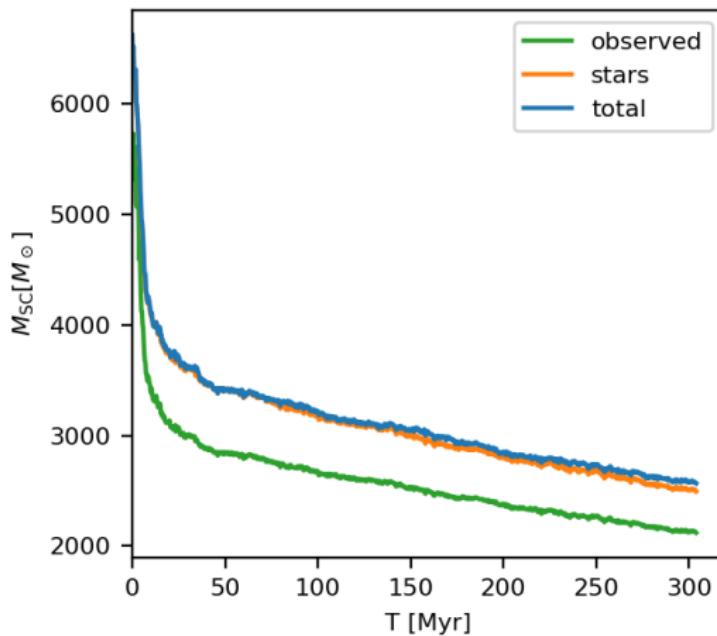

Figure: Wirth et al. (2023, in submission)

# The apparent mass function

$$dN = \xi(m) dm$$
$$\xi(m) = k_i m^{-\alpha_i}$$

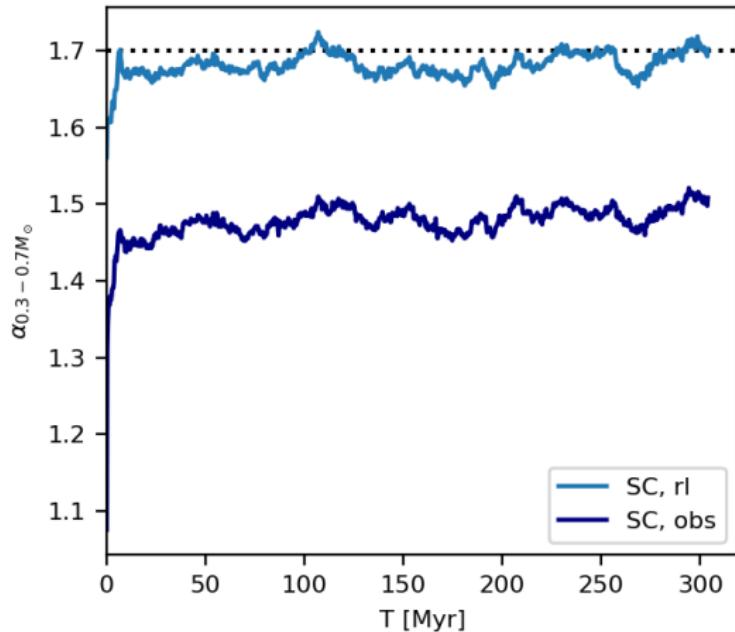

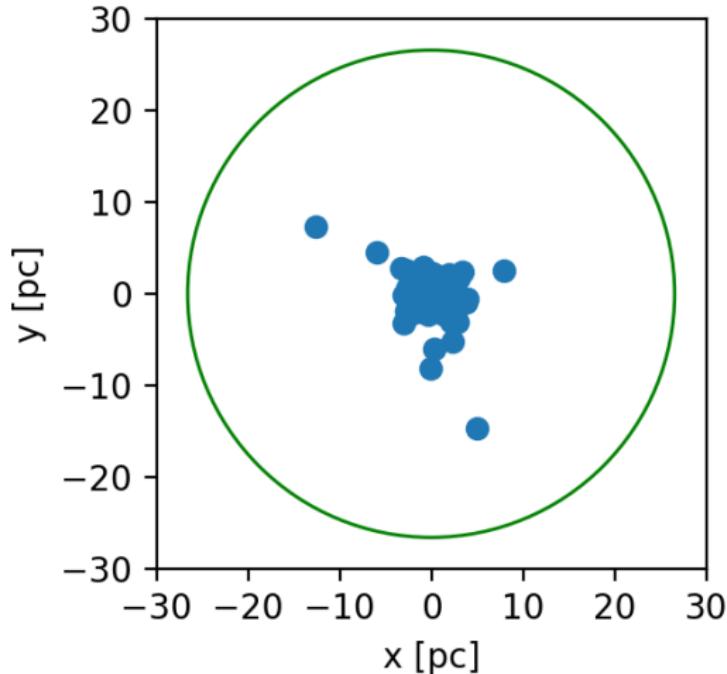

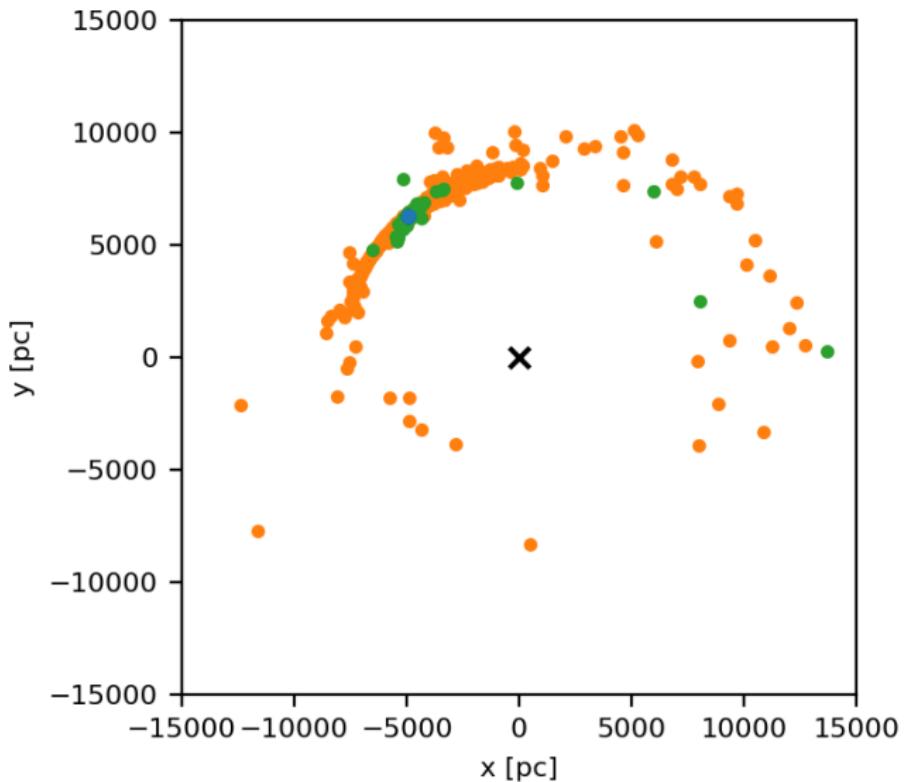

Figure: Wirth et al. (2023, in submission)

## The tidal tails

## The tidal tails

# Changes to the tidal tails

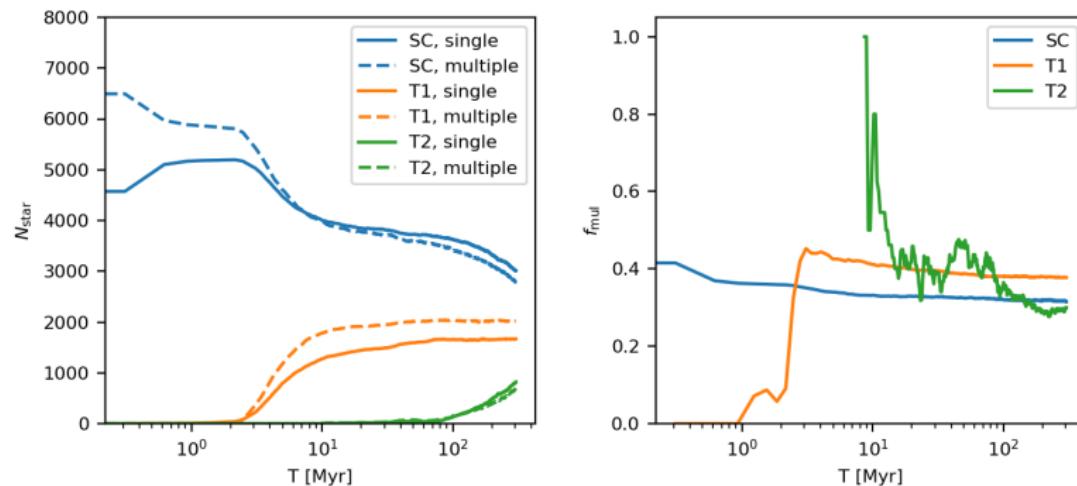

Figure: Wirth et al. (2023, in submission)

# Changes to the tidal tails

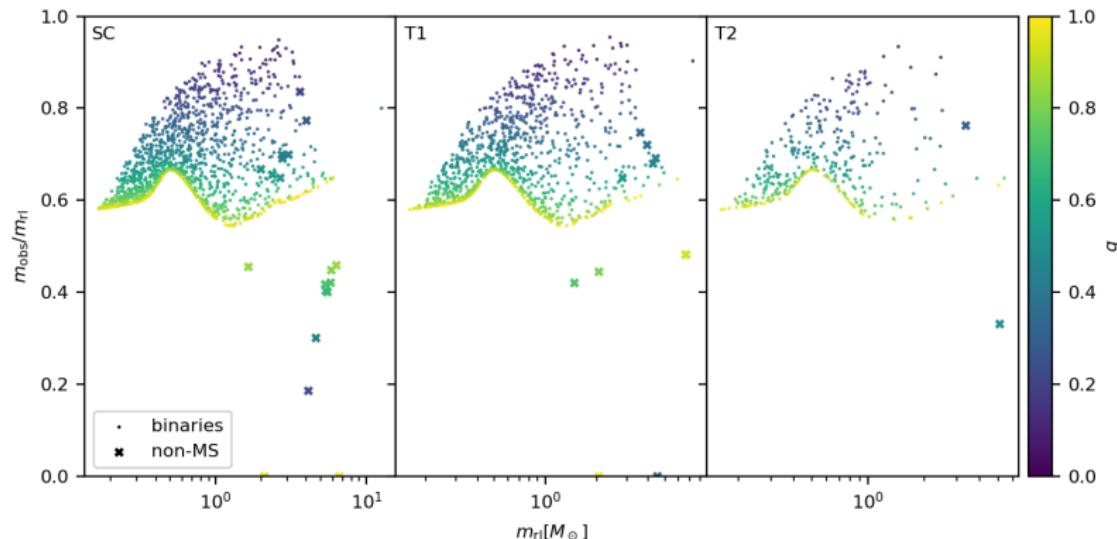

Figure: Wirth et al. (2023, in submission)

# Changes to the tidal tails

# Changes to the tidal tails

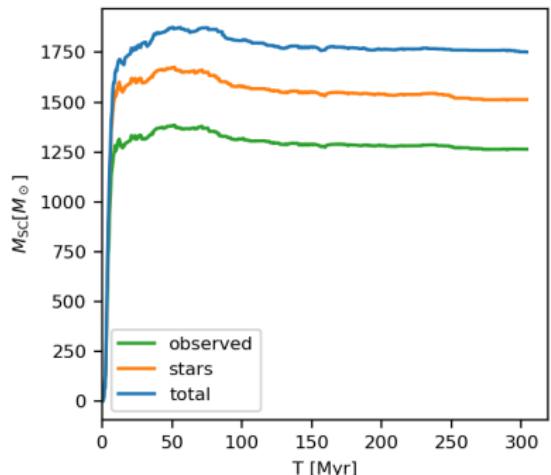

Figure: Wirth et al. (2023, in submission)

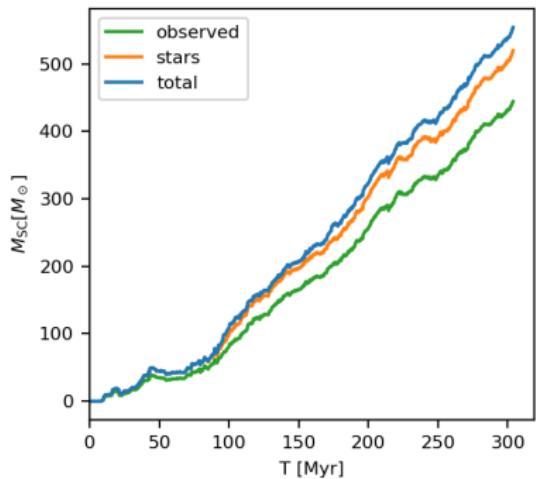

Figure: Wirth et al. (2023, in submission)

## Changes to the tidal tails

$$dN = \xi(m) dm$$
$$\xi(m) = k_i m^{-\alpha_i}$$

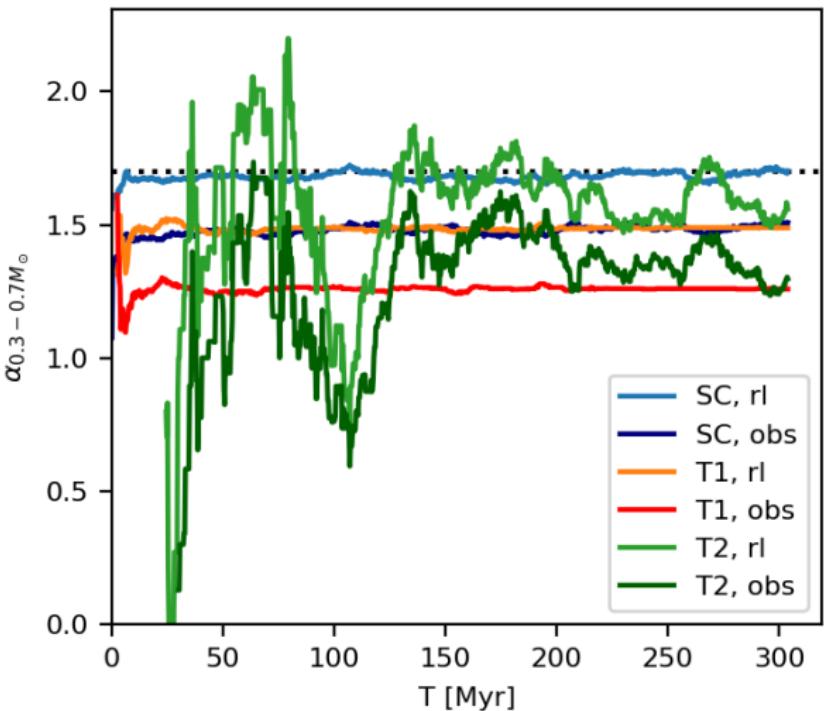

Figure: Wirth et al. (2023, in submission)

## Summary

- Unresolved binaries lead to an underestimate of the total mass of the binary system.
- The total mass of the SC is underestimated by up to 25 % due to binaries and dark objects.
- This can explain the difference in visible and dynamical mass in Hyades.
- The masses of the tidal tails are underestimated by a similar amount.
