## Hard X-ray Flare observations by Solar Orbiter/STIX

The hard X-ray imaging spectrometer STIX onboard Solar Orbiter has been operating continuously for 3.5 years recording over 50'000 solar flares. This poster will present science highlights including results from the Solar Orbiter Flare Watch from Spring 2024.

**Primary author:** KRUCKER, Säm (FHNW & UC Berkeley)

**Session Classification:** Coffee break and poster session 2

**Track Classification:** Multi-scale energy release, flares and coronal mass ejections
