

# **The Milky Way Assembly Tale - Plot and characters as of today, and what to expect in future editions**

Monday, 27 May 2024 - Friday, 31 May 2024

Bologna

## **Book of Abstracts**

no

# Contents

The Milky Way’s assembly tale told by the different characters . . . . .	1
L. Thulasidharan . . . . .	1
Tracing the Milky Way’s ancient footsteps: Insights from chemodynamical investigations of bright and distant metal-poor stars . . . . .	1
A Walk on the Retrograde Side (WRS) project . . . . .	1
Disc emergence in the Milky Way and the local view on the messy, turbulent state of high-redshift galaxies . . . . .	1
Bar resonances in the highly eccentric stellar halo . . . . .	1
Simulation Perturbation Theory: Modeling the Response of Stellar Streams to Galactic Substructure with Differentiable Simulations . . . . .	1
Unveiling the Galactic Horizons: From the Heart to the Halo . . . . .	2
Chemistry of halo substructures . . . . .	2
The Role of the r-Process in Shaping the Milky Way’s History . . . . .	2
Deciphering the Primordial Milky Way: Insights from Galactic Chemical Evolution Modeling . . . . .	2
The origins of stellar populations in the Milky Way halo revealed by precise chemical abundances . . . . .	2
New views on the metal-poor Milky Way halo . . . . .	2
Unveiling the dynamical properties of the ancient inner Galaxy with PIGS . . . . .	2
Metallicity distributions of halo stars: do they trace the Galactic accretion history? . . .	3
Chronochemodynamics of the Milky Way Halo with GALAH . . . . .	3
Discussion . . . . .	3
The History of the Galactic Disk(s) . . . . .	3
On the early assembly history of the Galaxy . . . . .	3
Galactic Archaeology with Globular Clusters - Europium is a Chemical Tag Between Globular and their Hosts Across All Metallicities . . . . .	3

Globular Cluster Stream Populations of Milky Way-type Galaxies - How Many More Streams Can We Find? . . . . .	4
Chemical Cartography of the Sagittarius Stream with Gaia . . . . .	4
A portrait of the vast polar structure as a young phenomenon: Hints from its member satellites . . . . .	4
The epoch of Milky Way dwarf accretion from Gaia DR3 . . . . .	4
The impact of early mergers in the star formation history of the Milky Way disc . . . . .	4
TBC . . . . .	4
On the origin of the Galactic thin and thick discs, their abundance gradients and the diagnostic potential of their abundance ratios . . . . .	4
What is rotating in the ancient Milky Way: a disc or a halo . . . . .	5
Stellar radial migration induced by bar-spiral interaction in the Milky Way . . . . .	5
The Milky Way Assembly tale from the dynamics of its disc and substructures . . . . .	5
Warping, breaking and spiralling: the many disturbances of the outer Milky Way disc . . . . .	5
Late accretion history of the Milky Way encoded in the disc phase space . . . . .	5
F. Sestito . . . . .	5
Discussion . . . . .	5
Deciphering the evolution of the Milky Way discs: Gaia APOGEE Kepler giant stars and the Besançon Galaxy Model . . . . .	6
Unveiling the Formation of the Milky Way Disk: A Comprehensive Exploration of the Proto-Galactic Disk Star Formation History . . . . .	6
Gaia's all-sky data to unravel the Galactic disk evolution . . . . .	6
A search for substructures near the Galactic plane using RR Lyrae stars as tracers . . . . .	6
The chemistry of the Milky Way disc with the Gaia space mission . . . . .	6
Chemical Cartography in the Galactic Disk . . . . .	6
Constraining the Milky Way disk's chemical evolution using an empirically derived metallicity profile with time and radius . . . . .	7
Probing the Solar Neighborhood: A Comprehensive Analysis of our neighborhood's Age x Metallicity relation through ~ 50000 Subgiant Stars . . . . .	7
The assembly history of the Milky Way satellites . . . . .	7
A Magellanic origin of the satellite plane? . . . . .	7
On the possible Origins of Phase-Space Structures among Satellite Galaxies in the Local Group . . . . .	7

Hints of a disrupted binary dwarf galaxy in the Sagittarius stream . . . . .	7
Insights into the Assembly History of M31 from its Halo Globular Clusters . . . . .	8
The Assembly History of Andromeda Galaxy (M31): A Major Merger Model and Direct Comparison with Chemodynamical Observations . . . . .	8
A SPLASH of Kicked-Up Disk Stars in Andromeda’s PHAT Halo . . . . .	8
Signs of hierarchical merging events in dwarf galaxies . . . . .	8
Discussion . . . . .	8
Machine-learning methods for stellar spectroscopy in the era of large scale surveys . . . . .	8
Spectro-Translator: A new method to homogenize large Spectroscopic catalog . . . . .	8
From metal-poor to metal-rich - new insights on MW disc history with machine learning and Gaia . . . . .	9
Machine learning models for separating accreted and in-situ stars in Milky Way-type galaxies . . . . .	9
A revolution in stellar age determination . . . . .	9
Star formation history of the Milky Way disk with Gaia DR3 . . . . .	9
Massively determining stellar ages with SPInS . . . . .	9
Chronology of our Galaxy from Gaia color-magnitude diagram fitting (ChronoGal): spatially resolved star formation histories of the Milky Way disk and halo . . . . .	9
Precision and accuracy of stellar age estimates . . . . .	9
The CARMA project: homogeneous ages of Globular clusters to probe the Galactic assembly . . . . .	10
Impact of $\alpha$ and O enhancement on asteroseismic age determination of field stars: application to the APO-K2 catalogue . . . . .	10
Helioseismic determination of the metal mass fraction in the solar convective envelope . . . . .	10
Uncertainties on stellar models and methods of age estimates . . . . .	10
Tracing the Milky Way’s Journey Through Time . . . . .	10
New view of Galactic discs : unveiling precise ages with individual oscillation modes . . . . .	10
The Milky Way Assembly Tale: the Plato era . . . . .	11
Discussion . . . . .	11
The Milky Way Assembly Tale as told by the NIHAO-UHD simulations . . . . .	11
High-fidelity cosmological simulations of the Local Group . . . . .	11
The cosmological formation of Milky Way-like disks . . . . .	11

Studying the stellar disc and halo of the Milky Way with the GASTRO Simulations and Blue Horizontal Branch Stars . . . . .	11
Predicting the impact of the Galaxy's mergers on the disc(s) and bar with cosmological simulations . . . . .	11
Origin of chemical bimodality in the Milky Way-like disk galaxies: insights from cosmological simulations . . . . .	12
Digging for the relics of ancient mergers at the heart of the Milky Way . . . . .	12
Introduction . . . . .	12

Session: MW Halo chemo-dynamics / 218

## **The Milky Way's assembly tale told by the different characters**

Session: MW Halo chemo-dynamics / 219

### **L. Thulasidharan**

Session: MW Halo chemo-dynamics / 220

## **Tracing the Milky Way's ancient footsteps: Insights from chemo-dynamical investigations of bright and distant metal-poor stars**
