

The solar wind: a paradigm for complex system dynamics

Simone Benella

INAF – Istituto di Astrofisica e Planetologia Spaziali, Roma

`simone.benella@inaf.it`

Primary objectives of the project

- Provide a **phenomenological framework** for solar wind turbulence at kinetic scales based on Langevin equation
- Use the model for making predictions on typical statistical quantities investigated in the field of turbulence, e.g., **scaling exponents** of structure functions and test them on independent spacecraft observations
- Investigate the **stochastic entropy production** associated with the Langevin process and make a link between stochastic thermodynamics and scaling properties of turbulence (e.g., intermittency)

[SBenella+2022ApJL]

- The selection of suited high-resolution data intervals for the developing of the project as been completed
- The Python code for modeling plasma turbulence through Langevin equation has been finalized and it has been used in a recent work <https://doi.org/10.3390/atmos14091466>
- The first test of the Langevin modeling of kinetic scales on independent data samples from both spacecraft observations and numerical simulations has been published <https://doi.org/10.1103/PhysRevResearch.5.L042014>
- The exploration of the stochastic thermodynamics application to solar wind, constituting the second part of this project, has begun, and first results have been submitted for publication to Astrophys J Lett

Deliverables and future activities

Invited Talks

- XVIII Encuentro de Física, Oct 15 – 20 2023, Quito, Ecuador
- CMD30 - FisMat, Sep 4 – 8 2023, Milan, Italy
- IUGG, Jul 11 – 20 2023, Berlin, Germany
- Isradynamics, March 7 – 14 2023, Dead Sea, Israel

Conferences

- AGU 2023, San Francisco, *abstract ID 1404723*
- Società Italiana di Fisica Statistica, Jun 21 – 23 Jun 2023, Parma, Italy
- EGU General Assembly, 23 – 28 April 2023, Wien, Austria
- Workshop on Plasma Astrophysics, Nov 14 – 18 2022, Arcetri, Italy

Potential Issues

- Lack of reliable high-frequency measurements of plasma parameters (e.g., velocity and density) in solar wind

Future Activities

- Test and generalization of the Python codes developed for Langevin modeling and stochastic entropy analysis
- Publication of final results obtained in the context of the project
- Presentation of results to international conferences to disseminate results and foster possible international collaborations
