

8th Heidelberg International Symposium on High-Energy Gamma-Ray Astronomy

Contribution ID: **228** Contribution code: **INSTR/SW**

Type: **Highlights**

Highlights from H.E.S.S.

Friday 6 September 2024 09:00 (25 minutes)

The High Energy Stereoscopic System HESS continues to operate with very high efficiency and a high rate of five-telescope stereoscopic data taken every year. The facility is mature and operates in a stable instrumental configuration. This allows for extensive observations of homogeneous data quality - either in deep observations or homogeneous surveys and facilitates high up-time as required for time-domain studies.

This presentations provides an overview of recent highlights in the various domains of gamma-ray astronomy, studies of cosmic rays and a view ahead.
