how much

This WP includes the participation of several INAF Institutions and Universities through a series of 23 activities:

INAF

- OA Abruzzo: 3401 (AL M. **Canzari**)
  - OA Arcetri: 3402 (AL E. **Giani**)
  - OA Brera: 3202 (AL M. **Riva**)
  - OA+IRA Bologna: 3303 (AL L. **Schreiber**), 3331 (AL I. **Prandoni**)
  - OA Cagliari: 3332 (AL A. **Possenti**)
  - OA Capodimonte: 3201 (AL E. **Cascone**), 3404 (AL G. **Capasso**)
  - OA Catania: 3333, 3403 (AL S. **Riggi**)
  - OA Padova: 3301 (AL C. **Arcidiacono**), 3405 (AL A. **Baruffolo**)
  - OA Palermo: 3311 (AL S. **Benatti**), 3312 (AL C. **Cecchi Pestellini**)
  - OA Roma: 3302 (AL R. **Piazzesi**), 3304 (AL G. **Fiorentino**), 3321 (AL E. **Merlin**)
  - OA Trieste: 3406 (AL P. **Di Marcantonio**)
- Dip. Fisica, Università Federico II di Napoli: 3101, 3102 (AL G. **Russo**), 3103 (AL G. **Longo**)
  - Dip. Fisica e Chimica, Università di Palermo: 3313 (AL G. M. **Palma**)
  - Dip. Statistica, Sapienza Università di Roma: 3322 (AL P. **Brutti**)

WP3000  
who  
what  
how much

This WP is devoted to deploy IT facilities to support the activities necessary for the development and exploitation of new generation astronomical instrumentation.

**Main deliverables:**

- ❑ **AD HOC (Astrophysical Data HPC Operation Center):** archiving and processing multi-band data by means of data science and Astroinformatics paradigms (**UNINA 3101, 3102, 3103**)
- ❑ **Advanced Software facilities:**
  - producing an ensemble of SW tools for the scientific exploitation of AO data, ELT PSF reconstruction, stellar fields analysis (**OAPD 3301, OAR 3302, 3304, OAS 3303**)
  - image topological analysis, and source deblending (**OAR 3321, UNIRO 3322**)
  - deep analysis of the origin and evolution of planetary atmospheres and the possible impact of biological processes (**OAPA 3311, 3312, UNIPA 3313**)
  - upgrading existing radio interferometry data reduction and analysis tools, optimizing them for either low and high frequency data (**IRA 3331, OAC 3332, OACT 3333**)
- ❑ **Support for instrument design:** development of a INAF-wide Concurrent Design Facility, which will transform the way INAF develops its own instruments (**OACN 3201, OABR 3202**)
- ❑ **Support for instrument control systems:** a network of facilities for prototyping of control software (**OAAb 3401, OAAr 3402, OACT 3403, OACN 3404, OAPD 3405, OATS 3406**)

# Support for instrument design

**Activity 3201** is focused on the renovation of a historical building of INAF OACN, to be converted into a Concurrent Design Facility for the development of astronomical instrumentation.

AL E. Cascone (NA)

AL M. Riva (MI)

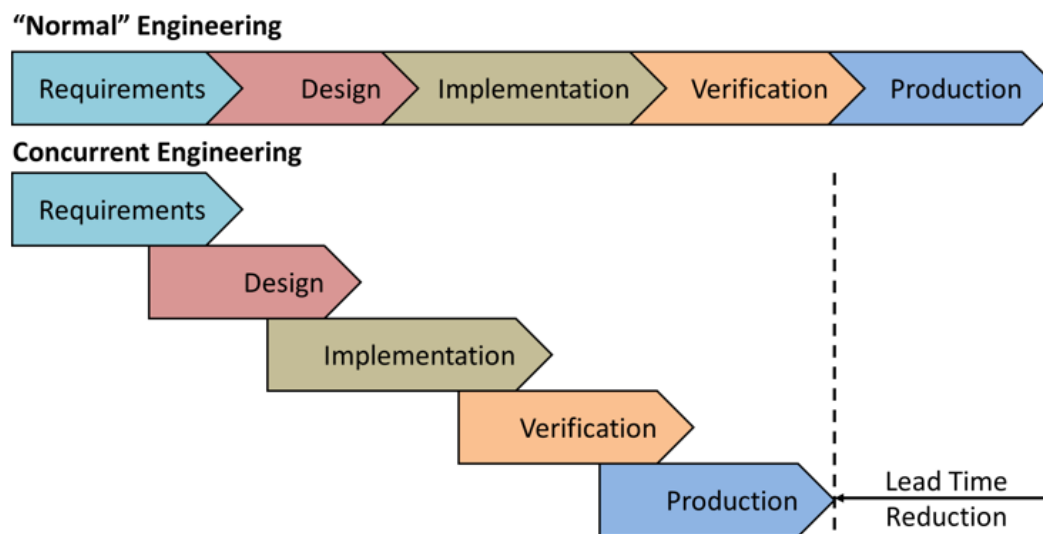

**Activity 3202** is aiming at procuring and implementing the necessary hardware and software to make the Concurrent Design Facility auxiliary node fully operational.

# Support for instrument design

## Concurrent Design Facility

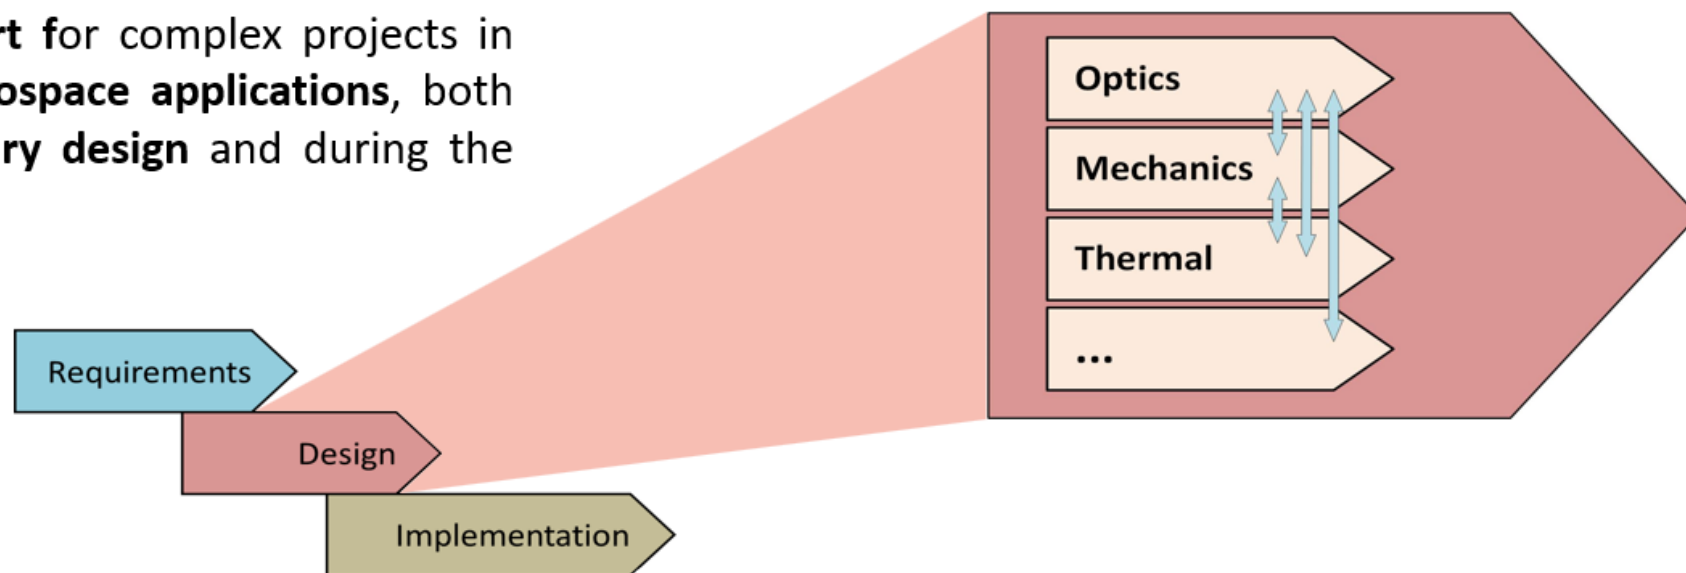

A **Concurrent Design Facility** is the set of infrastructures, devices, methodologies and processes that allows **engineering teams** with people from different backgrounds to **work closely together**, at the **same time**, on all the aspects of the design.

This coordinated effort helps to achieve complex design definition **more easily and quickly**, through an engineering management protocol, compared to a "step-by-step" approach, which is the traditional method used both for small and big projects, where each team works individually with only little direct interaction with each other.

# Support for instrument design

Concurrent engineering has been proven to be **extremely efficient in terms of time and effort** for complex projects in various fields, and especially in **aerospace applications**, both for **feasibility studies** and **preliminary design** and during the following phases.

The main effort of the Activity 3201, other than the creation of the CDF itself, is aimed at **creating a standard** for concurrent engineering that is tailored to the design of **astronomical ground-based instrumentation**.

# CDF @Napoli

M. Brescia 

A historical building at INAF - Osservatorio Astronomico di Capodimonte has been selected to be converted into a **Concurrent Design Facility (CDF)**. The foreseen CDF will be equipped with hardware, software and communication tools that bring the **multidisciplinary work** together in a pragmatic and guided way.

With the growth in size and complexity of astronomical projects in INAF, the standard approach is becoming more and more difficult to apply in an effective manner. Adopting the concurrent engineering methods can be an effective answer to the current and future challenges of the design process.

Our ICT @  UNIVERSITÀ DEGLI STUDI DI NAPOLI FEDERICO II

AD HOC

# Astrophysical Data HPC Operation Center

M. Brescia 

Designed, developed and hosted by Dept. of Physics  
Regulated by a next MoA between INAF and Dept.  
Director: G. Russo (M. Brescia since Nov 1, 2024)

Data/processing Science services:  
bio- geo- astro- informatics

Data/processing services for astrophysics:  
ELT, SKA, VST, ALMA, Rubin-LSST

Funded by NextGenerationEU (~ 7 M€)
