

# The great synergy between **THESEUS** and **ELT/SHARP**

Transient High-Energy Sky and Early Universe Surveyor

**INAF**

ISTITUTO NAZIONALE  
DI ASTROFISICA

**Lorenzo Amati**  
on behalf of the  
**THESEUS Consortium**

Unveiling the Universe with SHARP

# Gamma-Ray Bursts: the most extreme phenomena in the Universe

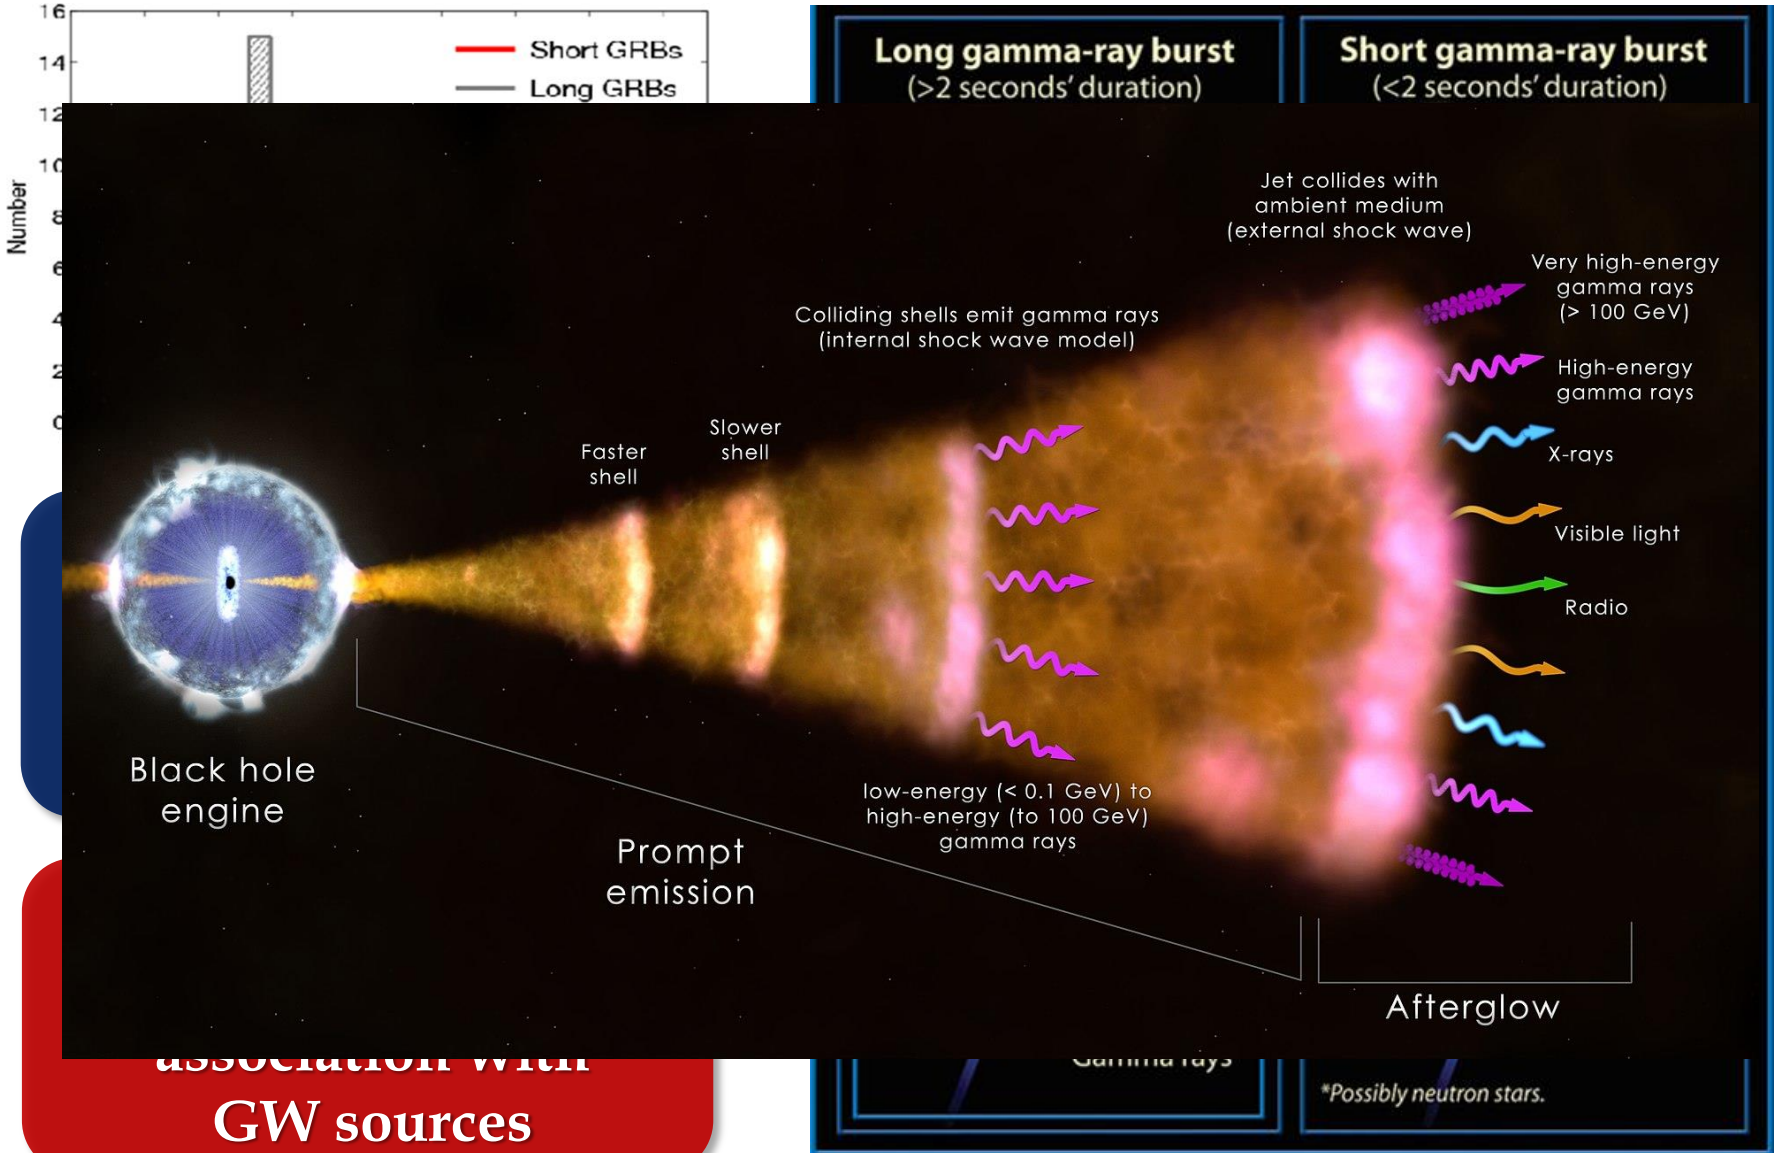

Long GRBs: core collapse of peculiar massive stars, association with SN

Short GRBs: NS-NS or NS-BH mergers, association with GW sources

# Gamma-Ray Bursts: the most extreme phenomena in the Universe

ASSOCIATION WITH  
GW sources

# Next generation GRB missions ('30s)

- Probe the early Universe (first stars, first galaxies, cosmic reionization), by unveiling and exploiting the population of **extremely distant cosmic Gamma - Ray Bursts (GRB)**
- Provide a fundamental contribution to multi-messenger astrophysics **through GRB produced by merging neutron stars and other X/gamma-ray transient sources**

- 2018-2021: ESA PHASE-A STUDY (2018-2021) AS M5 CANDIDATE
- 2022: SELECTED FOR PHASE 0 STUDY (2023) WITHIN M7 PROCESS
- 2023: SELECTED FOR PHASE-A STUDY (2024-2026) AS M7 CANDIDATE
- M7 TIMELINE: PHASE-A (2024-2026), ADOPTION 2028, LAUNCH 2037

# Shedding light on the early Universe with GRBs

❑ **Long GRBs:** huge luminosities, mostly emitted in the X and gamma-rays

❑ **Redshift distribution** extending at least to  $z \sim 9$  and association with exploding massive stars

❑ **Powerful tools for cosmology:** SFR evolution, physics of re-ionization, high- $z$  low luminosity galaxies, pop III stars

# Shedding light on the early Universe with GRBs

A statistical sample of high- $z$  GRBs can provide fundamental information:

- measure independently the **cosmic star-formation rate**, even beyond the limits of current and future galaxy surveys
- directly (or indirectly) detect the **first population of stars (pop III)**

Observatory / AURA  
/ Levan, Tanvir,  
Cucchiara

# Detecting and studying primordial invisible galaxies

Robertson&Ellis12

Even **JWST** and **ELTs** surveys will be not able to probe the faint end of the galaxy Luminosity Function at high redshifts ( $z > 6-8$ )

# Detecting and studying primordial invisible galaxies

# Detecting and studying primordial invisible galaxies

- neutral hydrogen fraction
- escape fraction of UV photons from high-z galaxies
- early metallicity of the ISM and IGM and its evolution

# Detecting and studying primordial invisible galaxies

- neutral hydrogen fraction
- escape fraction of UV photons from high-z galaxies
- early metallicity of the ISM and IGM and its evolution

## Beyond even JWST capabilities:

- Primordial galaxies detection and characterization Independent on mass and luminosity
- Allow absorption spectroscopy (needed because most metals are in neutral gas and for dust ratio)
- Properties of primordial IGM
- Targets for JWST

HI(Lya)

# Shedding light on the early Universe with GRBs

# Short GRBs and multi-messenger astrophysics

GW170817 + SHORT GRB 170817A + KN AT2017GFO ( $\sim 40$  Mpc):

Lightcurve from *Fermi*/GBM (50 – 300 keV)

Gravitational-wave time-frequency map

# Short GRBs and multi-messenger astrophysics

GW170817 + SHORT GRB 170817A + KN AT2017GFO ( $\sim 40$  Mpc):

Lightcurve from *Fermi*/GBM (50 – 300 keV)

Gravitational-wave time-frequency map

# GRB: a key phenomenon for multi-messenger astrophysics (and cosmology)

GW170817 + SHORT GRB 170817A + KN AT2017GFO

Relativistic jet formation,  
equation of state,  
fundamental physics

Cosmic sites of r-  
process nucleosynthesis

New independent route  
to measure cosmological  
parameters

# THESEUS Mission Concept

THIS BREAKTHROUGH WILL BE ACHIEVED BY A MISSION CONCEPT  
OVERCOMING MAIN LIMITATIONS OF CURRENT FACILITIES

Set of innovative wide-field monitors  
with **unprecedented combination of  
broad energy range from gamma-rays  
down to soft X-rays**, FOV and  
localization accuracy

# THESEUS Mission Concept

THIS BREAKTHROUGH WILL BE ACHIEVED BY A MISSION CONCEPT  
OVERCOMING MAIN LIMITATIONS OF CURRENT FACILITIES

Set of innovative wide-field monitors  
with **unprecedented combination of  
broad energy range from gamma-rays  
down to soft X-rays**, FOV and  
localization accuracy

On-board **autonomous fast follow-up in  
optical/NIR**, arcsec location and  
redshift measurement of detected  
GRB/transients

# Expected performances: early Universe

# Expected performances: early Universe

# Multi-messenger science with THESEUS

M7 timeline: great synergy with 3G GW detectors (ET, CE)

E.D. Hall, 2022

# Multi-messenger science with THESEUS

## INDEPENDENT DETECTION & CHARACTERISATION OF THE MULTI-MESSENGER SOURCES

Lessons from GRB170817A

THESEUS + ET in 3 years:

- ~70 aligned+misaligned short GRB
- additional long GRBs from mergers and possible GW-X-ray transients

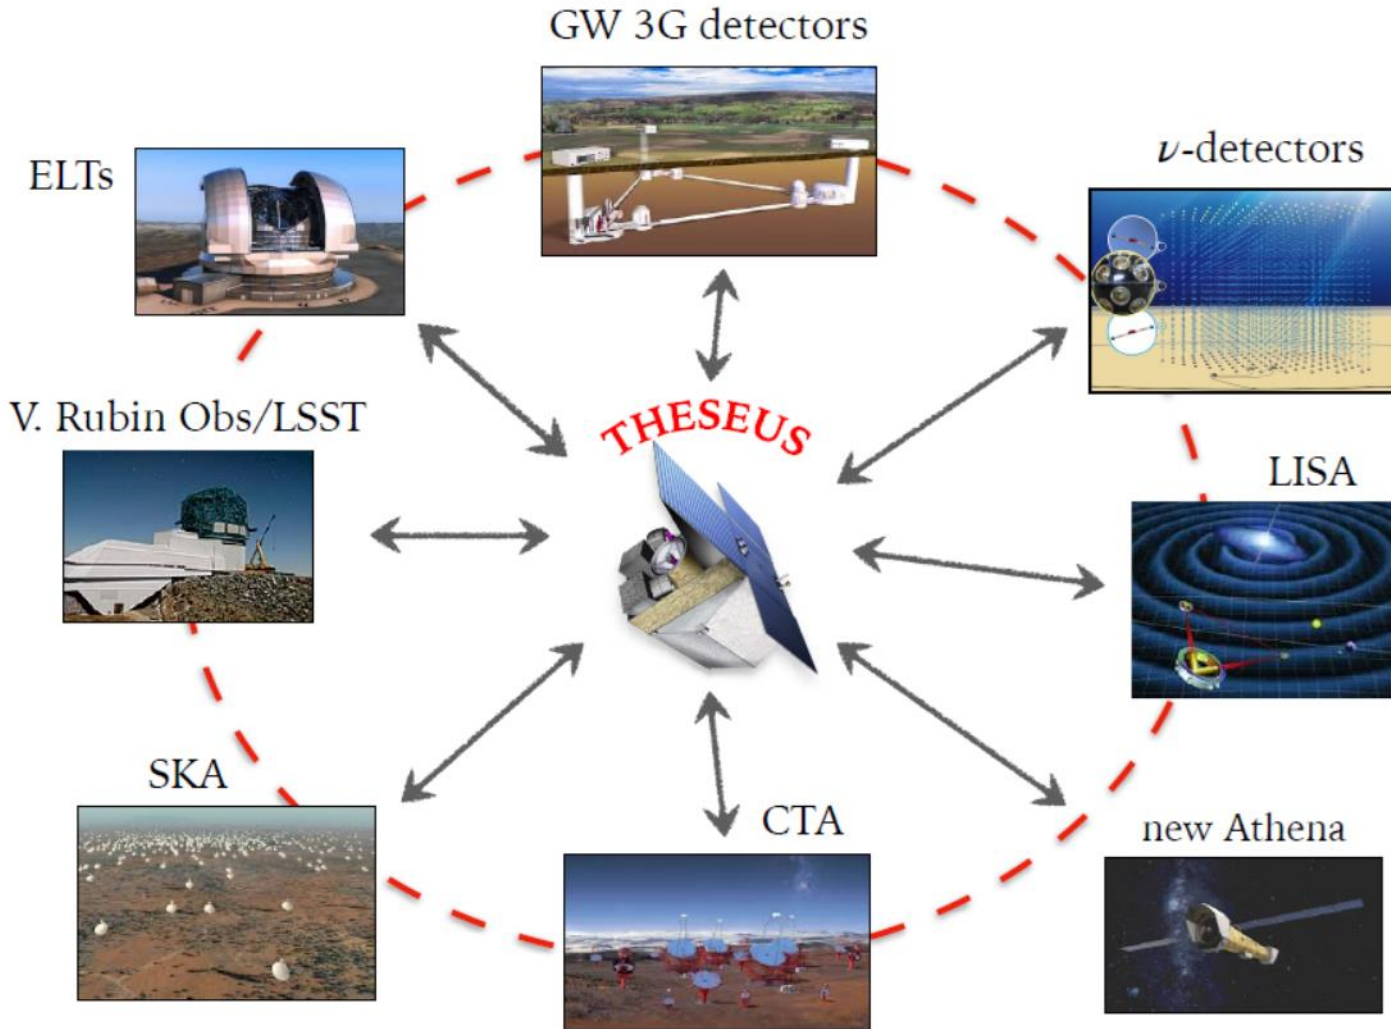

Higher redshift events – X/ $\gamma$  is likely only route to EM detection: larger statistical studies including source evolution, probe of dark energy and test modified gravity on cosmological scales

# Exploring the transient sky

- **GRBs extreme emission physics**, central engine, sub-classes & progenitors, **cosmological parameters & fundamental physics**
- Study of **many classes of X-ray sources** by exploiting the **simultaneous broad band X-ray and NIR observations**
- Provide a **flexible follow-up observatory** for fast transient events with **multi-wavelength ToO capabilities** and **guest-observer programmes**

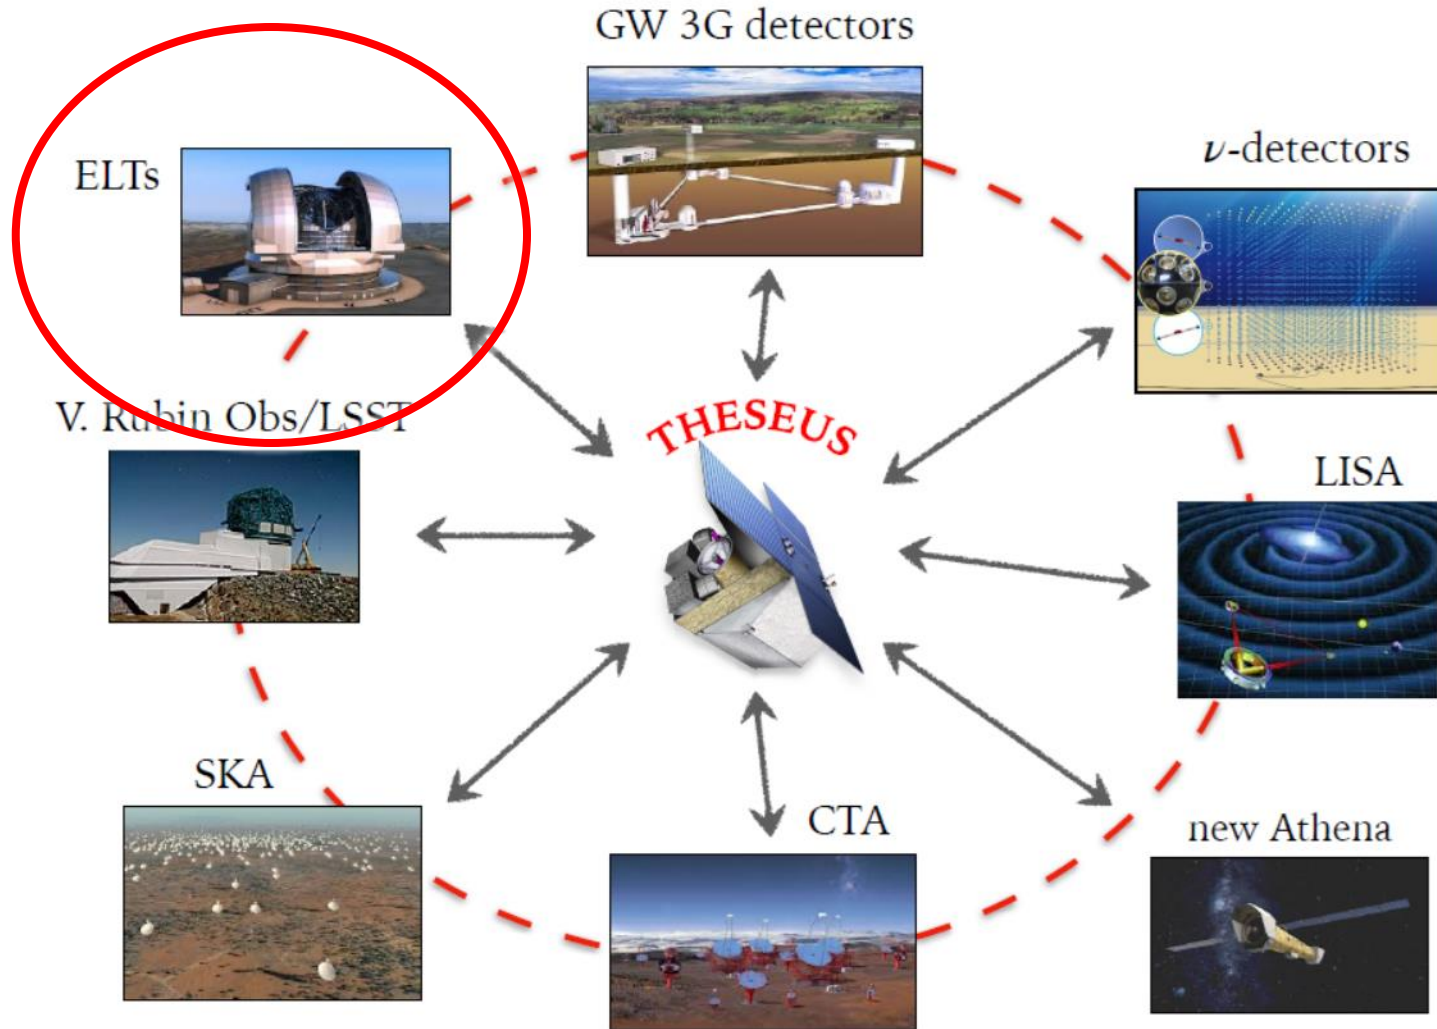

# THESEUS: crucial synergies in the late '30s

The «M7» timeline will allow to widely broaden the mission scientific impact by taking advantage of the perfectly matched synergies with major facilities coming fully operative in the 2030s (e.g., 3G GW detectors)

# THESEUS: crucial synergies with ELT

The «M7» timeline will allow to widely broaden the mission scientific impact by taking advantage of the perfectly matched synergies with major facilities coming fully operative in the 2030s (e.g., 3G GW detectors)

GRB accurate localization and NIR, X-ray, Gamma-ray characterization, redshift

z=8.2 simulated ELT afterglow spectrum

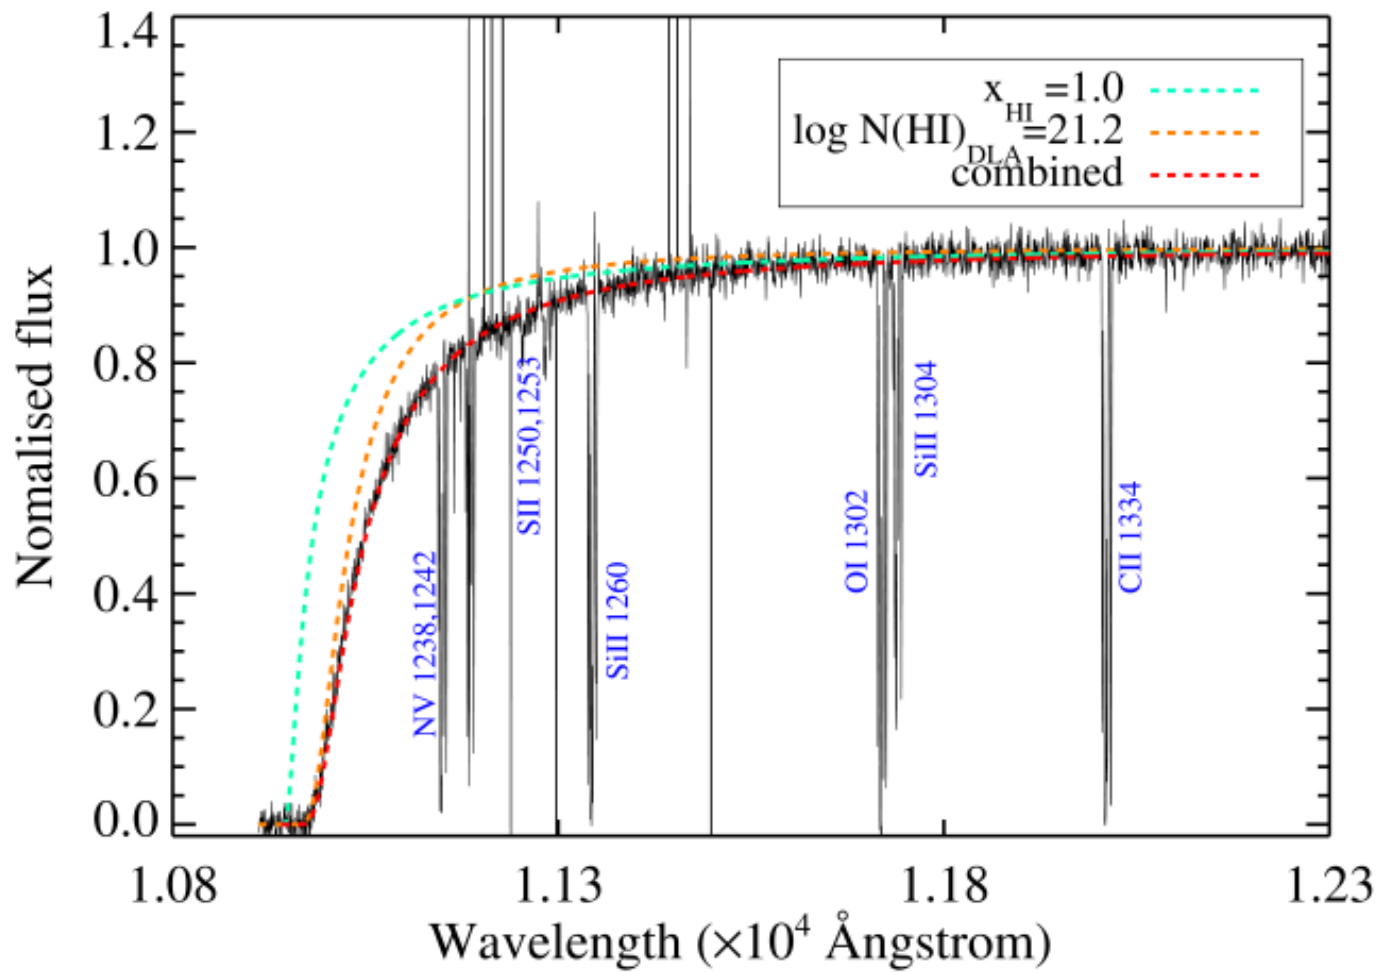

THESEUS SYNERGIES

Star formation history, primordial galaxies

Cosmic chemical evolution, Pop III

Neutral fraction of IGM, ionizing radiation escape fraction,

*Simulated ELT 30-minute spectrum of a  $z=8.0$  GRB afterglow with  $J(AB)=20$  (typical after  $\sim 0.5$  day). The S/N provides exquisite abundance determinations from metal absorption lines (in this example, 1% solar metallicity), while fitting the Ly-alpha damping wing simultaneously fixes the IGM neutral fraction and the host HI column density, as illustrated by the two overlaid models, a pure 100% neutral IGM (green,) and a  $\log(N_{\text{HI}}/\text{cm}^{-2})=21.2$  host absorption with a fully ionized IGM (orange). A well-fitting combined model is shown in red.*

# THESEUS and ELT/SHARP

## *Why SHARP - Rationale and Main Requirements*

### THE DISTANT UNIVERSE

Understanding and reconstructing how baryonic matter assembled at early times to form the first stars, galaxies and structures, how these evolved over cosmic time.

- ❑ Common core scientific objectives on early Universe and likely same timeline
- ❑ Synergy will greatly enhance scientific return of both, with THESEUS identifying and localizing faintest high-z galaxies and SHARP allowing faintest ELT reachable fluxes with wavelength range up to  $2.45 \mu\text{m}$
- ❑ Synergy also on multi-messenger science (e.g., pushing KN study at the limit)

# In summary

- ❖ GRBs are a key phenomenon for **cosmology, multi-messenger astrophysics** and **fundamental physics**
- ❖ Next generation GRB missions, like **THESEUS**, developed by a large European collaboration, studied (M5 Phase A) and re-selected (M7 Phase-0) by ESA **will fully exploit these potentialities and also provide unprecedented clues to GRB physics and a substantial contribution to time-domain astronomy**
- ❖ The “M7” timeline will allow an **unprecedented great synergy with future very large observing facilities**, with ELT being a key one which **would be importantly enhanced by SHARP**
- ❖ Because of the wide scope of its science goals, the great synergies and timeline and a **guest-observer programme, THESEUS scientific return will involve an unprecedented wide scientific community.**

- ❖ **THESEUS: ESA/M5 Phase A study and selected for M7 Phase 0 (->2037)**  
**SPIE articles on instruments, Adv.Sp.Res. & Exp.Astr. articles on science**
