Completing 20 years of X-ray monitoring of the Galactic Center: A Swift legacy

Wednesday 26 March 2025 17:45 (15 minutes)

The center of our Galaxy has been monitored with the Swift/XRT almost every day since 2006. Through the unique combination of high cadence and good X-ray sensitivity, this program provided excellent means to capture X-ray flares from the supermassive black hole Sgr A*, to study the accretion properties of 16 transient X-ray binaries, and to discover new X-ray transients. This talk will review the research highlights of nearly 20 years of Swift's X-ray monitoring of the Galactic center.

Author: DEGENAAR, Nathalie (University of Amsterdam)

Co-authors: KENNEA, Jamie (Penn State); Prof. MILLER, Jon (University of Michigan); REYNOLDS, Mark (University of Michigan); Prof. WIJNANDS, Rudy (University of Amsterdam)

Presenter: DEGENAAR, Nathalie (University of Amsterdam)

Session Classification: Novae and X-ray binaries
