Joint observation of GRBs detected by BeppoSAX/WFC and Konus-Wind

Tuesday 25 March 2025 14:29 (1 minute)

We present time-averaged and time-resolved (where possible) spectral analysis of prompt emission of a dozen GRBs (including GRB 990123) simultaneously detected by Konus-Wind and BeppoSAX/WFC instruments. Modelling the prompt emission spectra recorded in a wide energy range with the empirical functions is discussed in the context of thermal and non-thermal origin of emission.
