# Towards a data platform providing a holistic support to AtLAST operations

Francisco Montenegro

Universidad Complutense de Madrid (Spain)

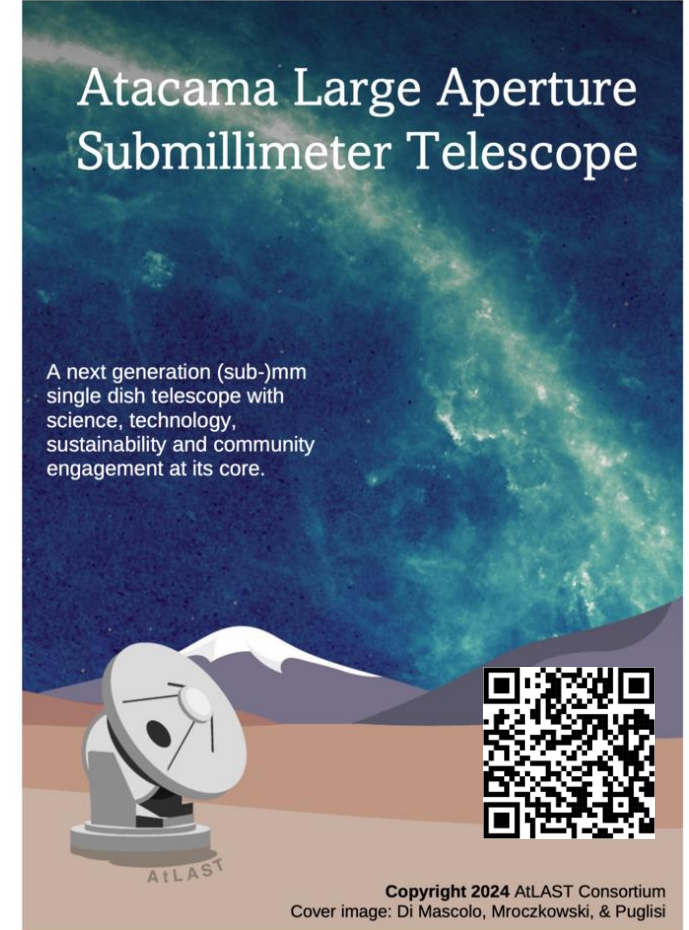

Archives and Data Management Systems in the Big Data Era. CNR Bologna, 2025 Feb 26-28

# AtLAST in poche parole

Future next-generation 50-m class single-dish sub-mm astronomical observatory, run as a facility telescope by an international partnership and powered by renewable energy.

- Transformational science
  - Sensitivity to study the typical populations of astronomical sources
  - Mapping the barion cycle on multiple spatial scales
  - Open the window to the time-varying (sub-)mm sky
- Innovative design, powerful capabilities, excellent site
  - Unprecedented field-of-view (1-2 degrees)
  - Several large multi-beam instruments
  - Accesible to sub-mm wavelengths (up to 350 micron)
- Sustainability, community engagement
  - Reduced carbon footprint in the long run
  - Dialogue with local communities
  - Sustainable operations for 30+ years

# AtLAST-2 (2025-2028)

Consolidating plans for the Atacama Large Aperture Submillimeter Telescope

Coordination. PI. Claudia Cicone

UNIVERSITY OF OSLO

## Project

- Grant agreement ID: [101188037](#)
- Funded with 4 M€

## Objectives

- Consolidate the AtLAST concept
- Prototype and test technology solutions
- Perform a full lifecycle assessment of the facility
- Expand our user community
- Increase TRL of crucial components
- Be ready for the implementation phase

# Key operations concepts

- **24h observing** (service mode) interrupted by maintenance periods
- Combination of survey projects and PI science
- **Remote operation (world-wide)** supported by local operation
- Dynamic AI-assisted scheduling
- Adequate monitoring of telescope systems and environment
- High-quality data to enable the best science
- **Data (raw and reduced)** to be **archived** and become **publicly available** after a 1-year proprietary period
- Effective **Interaction channels** between PIs and observatory
- Adequate data **accessibility** and **long-term preservation** (legacy value)
- Sharing of and synergies with **existing infrastructures** (transfer, HPC, storage, preservation)

# AtLAST data

## Scientific data

Level 0 (raw)  
Level 1 (calibrated)  
Level 2 (science-ready)  
Level 3 (special products)

## Simulated science data

## Weather data

Local weather station  
WV Radiometer  
Atmospheric model  
Forecasts

## Data categories

### Software and tools

Planning tools  
Operational  
Data analysis

### Engineering/technical data

Antenna and instruments  
Power, cooling, computing  
Processes, timing

## Aspects to consider

- Data model and documentation (metadata)
- Enormous data rates and volumes
- Data location (remote operation)
- Data sharing, interoperability
- Reproducibility
- Long term preservation
- Re-use of existing data and infrastructures

# AtLAST data will be

## Findable

Datasets Uniquely identified. Described with accurate and rich metadata. Follow IVOA standards

## Accessible

AtLAST portal + astronomical data portals. Open Access after limited proprietary period.

## Interoperable

Interactive and programmatic access. Alert system for transient sources.

## Reusable

Clear data provenance. Calibration files and pipelines accessible and version controlled

Funded by  
the European Union

# AtLAST Interface for Remote Exploration (AIRE)

- Technical and scientific documentation
- Proposal preparation tools
- Proposal review tools
- Phase 2 preparation

- Scientists
- Proposal reviewers
- Archive users
- General public

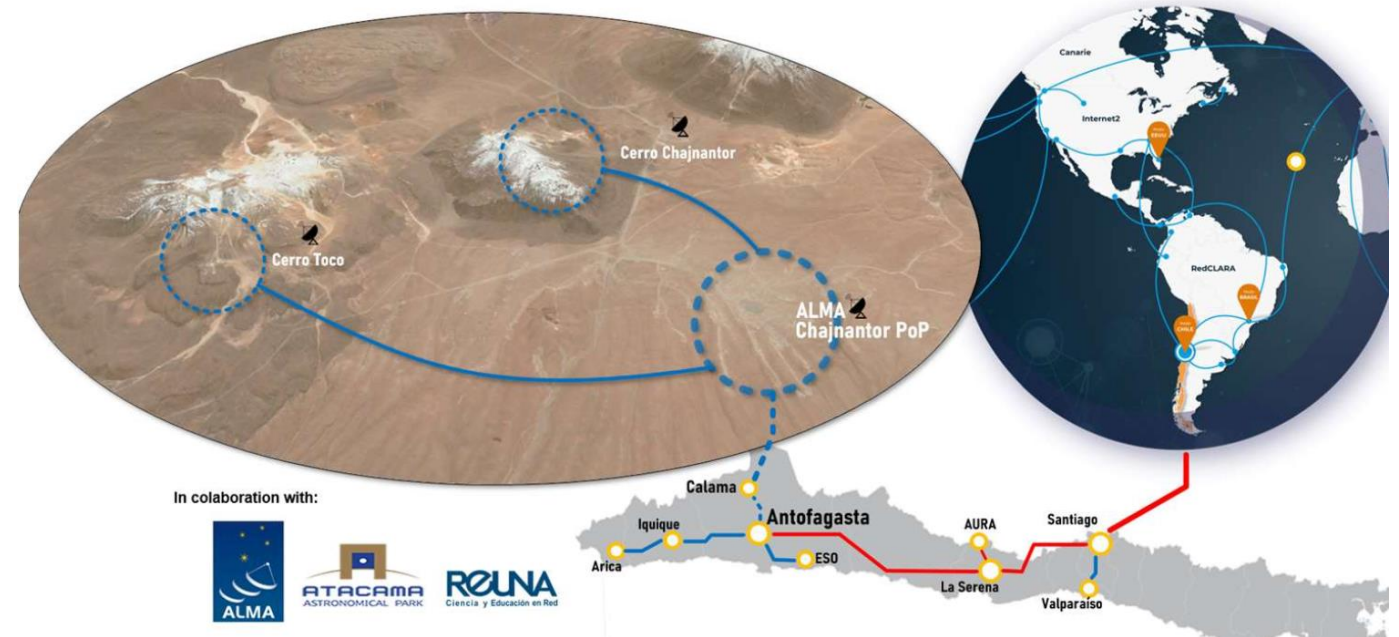

- Observations follow up
- Interaction channel during observing run
- Access to Archive
- Simulation, reduction and analysis tools, notebooks
- Support centre

# Existing infrastructures

Improved infrastructure is being developed rapidly on the Chajnantor plateau. AtLAST will need rapid and efficient data transfer capabilities, which is essential for the kind of operations model we are considering.

- **REUNA** (National research and education network in Chile) coordinated with ESO and ALMA to improve connectivity to Chajnantor plateau
  - Individual observatories to be responsible for the last part of the connection to the main system.
  - Connection to Cerro Toco / SO complete
- Current target for overall **100 Gbps** capacity

- Very large data volumes are a common feature of most new facilities; new solutions need to be developed for long term storage, access, availability.
- On-site data reduction strategies?
- Synergies advantageous for joint science analysis

Funded by  
the European Union

# Inspiring existing efforts

V. Navarro, S. Del Río, M. A. Diego, et al. (2024),  
ESA Datalabs: Digital Innovation in Space Science.  
[https://doi.org/10.1007/978-981-97-0041-7\\_1](https://doi.org/10.1007/978-981-97-0041-7_1)

Agile and Cognitive Cloud-edge Continuum management

Ongoing EU project. [Grant Agreement 101093129](#)

One use case is to demonstrate an efficient distributed processing of astronomical data cubes (100s of TB)

- Use of microservices
- Encapsulation of tools within containers
- Container orchestration platforms
- Compression, binning techniques for memory management
- Software optimization
- Scalability of software

Funded by  
the European Union
