Report of ADASS BoF

"How to cope with the rapidly increasing number of aggressive incoming requests?"

Grégory Mantelet

Services are overwhelmed

14M IP
150k IP until 2025

Peaks > **1M IP**

48M IP

~35k req/mth

Why?

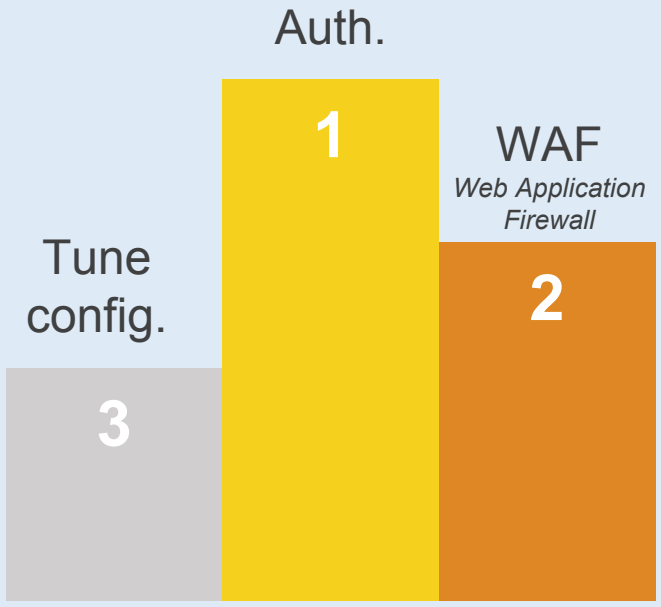

- **Web scrappers**
- ...driven by **AI**
- ...**distributed** (clouds, residential proxies, ...)

Consequences

- No more ban possible
- Polluted logs (then becoming useless)
- Constant monitoring
- Service restart when overloaded

We are powerless....but we can share

Helpful methods

Each method has its limits.
Combinations will help, but not filter all scrappers.

What next?

- Change servers infrastructure
- Wait for other and better solutions...

Let's share our experience more frequently in Ops Session!
