Combining large radio continuum surveys with multi-wavelength data to extract the science

Wednesday, 23 October 2019 14:00 (20 minutes)

The Australian SKA Pathfinder (ASKAP) is now generating radio images at an unprecedented sensitivity to diffuse emission. In particular, the Pilot Survey of the Evolutionary Map of the Universe (EMU), is starting to produce a stream of exciting new results. Here I will show some of these latest results from ASKAP, and show how we need to combine them with multi-wavelength data in order to understand the science behind them.
