

Documento di Visione Strategica

Statuto INAF: Articolo 12

Documenti programmatici

1) L'INAF opera sulla base:

a) del "Documento di Visione Strategica" dell'Ente, con i relativi aggiornamenti, predisposto ai sensi dell'articolo 5, comma 1, del Decreto Legislativo 31 dicembre 2009, numero 213, e approvato dal Consiglio di Amministrazione, su proposta del Consiglio Scientifico e sentiti sia il Direttore Scientifico che il Collegio dei Direttori delle Strutture di Ricerca...

DVS is aimed at identifying the most promising scientific and technological areas in which INAF has and/or should have a leading position during the next decade.

In this context major challenges in Astrophysics are identified together with the methods to tackle them and the possible/plausible INAF contribution to major projects in the international scenario.

Inverting the question-method-technology matrix

Key Questions and **methods** have been rearranged as a function of the existing and future projects, providing a *non-exhaustive* list of the activities, including the **enabling technologies**, in which INAF is or should be involved.

From the analysis of this material it is possible to extract a few **major recommendations** which are considered particularly important for the future development of the Italian Astrophysics.

Recommendations

Recommendations are **not intended as the only goals** that INAF should pursue in the future, but as **goals that are of special relevance** and should not be missed, together with other important activities, small-scale extremely innovative high-risk high-gain projects and the unceasing unforeseen breakthroughs that make Science a surprising and exciting discipline.
