

## Online scientific analysis tools for astronomy: the SSDC web services

*Monday 17 June 2019 16:25 (25 minutes)*

The ASI-SSDC offers a multitude of online and interactive web services for the astronomical community, which go from archiving and distribution of space mission data to online interactive analysis tools; from multi-mission and multi-wavelength cross-search catalogs to high-level data product services like the broadband spectral energy distribution (SED) builder and the SSDC Sky Explorer.

In this talk, I will present the main SSDC web services, their applications and practical use in the context of the multi-wavelength and multi-messenger astronomy.
